

ACT Test Prep Improves ACT Performance

Scores increased after ACT[®] Kaplan[®] Online Prep Live (OPL) enrollment, but low-income students experienced the greatest score increases.

Did you know that after one school year, students typically increase their ACT score by 1.64 points?

According to a new ACT study, students who use ACT Kaplan Online Prep Live (OPL) see their ACT Composite score increase nearly the same as the increase associated with attending school for almost two and a half months. That's about 33% of the score increase associated with attending school for one academic year.

ACT Kaplan Online Prep Live helps by providing students with live instruction and practice on ACT test subjects through a virtual classroom experience.

While students of all income levels benefit from using OPL, the ACT score increase was greatest for low-income students, increasing their score by almost 1 point more than low-income students who did not enroll in OPL. To make success even more achievable to low-income students, those who register for the ACT test with a fee waiver receive free access to OPL.

The Results

ACT Score Increases for Students Participating in ACT Test Prep*

1.64

One academic year is associated with an average score increase of 1.64

33%

Enrollment in OPL resulted in 33% of the increase typically seen in an entire year of classroom instruction.
